

MediusFlow™

PURCHASING MODULE

MEDIUSFLOW™ IS AN EFFICIENT IT support for processes which an existing management system does not handle. There are many processes in an organisation which are only partially supported, or not at all, by an existing management system. Using MediusFlow™ as a platform means that these processes are included, achieving better profitability, control and flexibility.

ABOUT MEDIUS

Medius' ambition is to provide the best business support in the world - from defining requirements to administration. We were founded in Sweden 2001, and today we have customers throughout Scandinavia, UK, US, Europe and the Middle East.

PURCHASING

MANAGE ALL TYPES OF PURCHASING ELECTRONICALLY and reduce the amount of manual management considerably. Purchasing in many businesses receives no support from the management system. Examples can include purchasing indirect materials which are not entered in the stock database, or a management system which does not support purchase requests and authority. By combining vendor invoice management with the MediusFlow™ purchasing module, the entire process is supported. All purchasing is stored in digital format and can therefore easily be matched with invoices.

SCALABLE SOLUTION FOR ALL PURCHASING

Medius' purchasing module within MediusFlow™ can be integrated with an existing purchasing function, but can also be managed as a separate purchasing function. The different flows in the module are scalable, so that they can be adjusted to your business needs. Several types of purchasing can also be facilitated, including item number-based, description-based or based on external item numbers. In fact, your business can now manage the entire purchasing process from purchase order to registration of goods upon arrival. Medius is the leading solution in Scandinavia for this process.

FLEXIBLE & POWERFUL

The MediusFlow™ purchasing module makes all flows scalable and can therefore be customised to any business. This gives the opportunity to manage authorisation limits and roles, plus requirements for printout, order

confirmation and arrival registration. Additional benefits are the avoidance of large amounts of paperwork and that the work to be done finds the user, rather than the user having to find the work.

CONTROLLED & EFFICIENT

The purchasing module allows your business to manage different types of purchasing, which means a major reduction in the amount of manual processing. Your business will have more control over its indirect purchasing, as all information can be collected in one place. This will also mean better control of one-off and less frequent purchasing occurring further down in the organisation.
